

## Introducing **ASSURANT® HT**

### The High-Temperature Solution for Exhaust Line Heating

**Watlow®** is pleased to introduce Watlow's new **ASSURANT® HT** high temperature heating jackets, designed to meet the challenging needs of semiconductor processing. **ASSURANT HT** delivers an even higher temperature range than our previous generation **ASSURANT** heaters, making it the perfect solution for the advanced chemistries and applications of today's semiconductor industry.

Our glass-based technology ensures that **ASSURANT HT** is semi-rated, capable of an output temperature of up to 350°C, minimizing clogging and fouling on abatement lines. Compatible with all existing Watlow controllers, **ASSURANT HT** is a true plug-n-play solution that allows for easy integration with your existing equipment.

Watlow's **ASSURANT HT** offers a step change in thermal performance for semiconductor processing. Visit [www.watlow.com](http://www.watlow.com) to learn more.
