

# Precision Control and Tamper-Evident Data: AMS2750 Compliance

By: Admin - April 15, 2024

An industrial oven and furnace manufacturer, specializing in box and conveyor ovens, faced a challenge: their 4-zone composite oven had to comply with the stringent AMS2750 standard.

Utilizing the E+PLC400—a combination of PLC and Pro-face HMI Panel PC with Indusoft software—enabled precision control, batch handling, and secure parameter recording. The solution provided a single unit for PLC, control, and data logging, fully meeting AMS2750.

Eurotherm's comprehensive service included hardware, custom programming, and start-up support, enhancing the client's research and development capabilities.
