

EPower's Innovative Energy Control and Impedance Monitoring

By: Admin - April 15, 2024

Implementing an EPower controller with Kanthal Super heaters has led to a significant advancement in heating system management.

This setup enables real-time monitoring of heater impedance, providing critical data for preventing overheating and extending heater lifespan. Controlled via a 2704 unit over Master Comms, this integration signifies a leap in technology, marrying half a century of innovation with the latest in energy control. The EPower system, recognized for its ingenuity with prestigious awards, not only optimizes energy efficiency and reduces CO2 emissions but also promises substantial cost savings and operational simplicity.

This forward-thinking solution stands to redefine global industry standards with its unmatched benefits.
