Thermostats and Accessories

ST10 and ST207

Watlow® offers several styles of sensors for use with flexible heaters. These sensors are available as preset or adjustable thermostats, thermocouples, thermistors, RTDs or thermal fuses. They can be integrally mounted (encapsulated in silicone rubber) to sense the temperature of either the part or the heater sheath. The thermostats can also be ordered separate from the heater, allowing direct control of your process temperature, if desired.

Pre-Set Thermostats

Several styles of non-adjustable, pre-set thermostats are available from Watlow. Thermostats separate from the heater are encapsulated in silicone rubber, and are available with standard 12 in. (305 mm) leads unless otherwise specified.

Thermocouples, thermistors, RTDs and thermal fuses are usually mounted to the heater under a vulcanized protective cap of silicone rubber sheath material. This drawing shows a typical mounting style for a thermocouple.

Note: Precise part temperature control with preset thermostats requires prototyping and field testing.

Pre-Set Thermostats (Non-Adjustable)

Notes:
- When ordering a pre-set thermostat separate from the heater, simply add the prefix S to the model number. (Example: ST-10) See next page.
- Snap action preset temperatures on the T-207 are close/open settings.
- T-10 thermostats are manufactured for specific preset temperatures. Available in 25°F increments.
- Other temperature ranges and voltages are available on special order. Minimum quantities apply, contact your Watlow representative before ordering.
Separate Heater Accessories Available — Pre-Set Thermostats Separate From Heater

These are offered to allow direct control of your process temperature, so you are not limited to controlling only the heater temperature when using catalog heaters. Pre-set thermostats are encapsulated in silicone rubber with standard 12 inch leads.

The same temperature ranges, ratings and sizes are available on these thermostats. When ordering, add “S” prefix to the model number to indicate “separate” item. (Examples: ST-10 and ST-207)

Standard leads are 12 in. (305 mm) 18 gauge UL® 1180 black leads.

Note: For direct control of air temperature as is required in enclosure heating applications, specify thermostat model number ST-207E. This is a modified ST-207 mounted on 1/32 inch thick G-10 circuit board with the thermostat’s metal cap exposed to sense air temperature.
Thermostats and Accessories

ST10 and ST207

Thermostat Ordering Information

To order, complete the part number with the information below:

- **Tstat Part #**
  - ST10
  - ST207
  - ST207E (sense air)

- **Options**
  - 0 = None

- **Sensors**
  - 0 = None

- **T10 Set °F**
  - A = 125
  - B = 150
  - E = 175
  - F = 200
  - G = 225
  - H = 250
  - J = 275
  - K = 300

- **T207 Set °F**
  - 1 = 40/55
  - 2 = 60/75
  - 3 = 95/110
  - 4 = 145/160

- **Lead Insulation**
  - 1 = 1180 UL® R/C
  - 2 = 1180 C-UL® R/C
  - 4 = 3134 18 Ga.
  - 6 = 1199 CSA
  - 9 = Type E PTFE
  - A = 1180 VDE
  - B = 1199 VDE

- **Lead Length**
  - A = 8 in.
  - B = 12 in.
  - E = 18 in.
  - F = 24 in.
  - G = 30 in.
  - H = 36 in.
  - J = 40 in.
  - K = 4 ft
  - L = 5 ft
  - M = 6 ft
  - N = 7 ft
  - P = 8 ft
  - R = 9 ft
  - S = 10 ft
  - T = 12 ft
  - U = 15 ft
  - V = 18 ft
  - W = 20 ft
  - Y = 22 ft
  - 1 = 25 ft
  - 2 = 30 ft

*Customer specified length must be noted in inches when ordering.*
Thermostats and Accessories

Bulb and Capillary

Thermostats regulate temperature in non-critical applications. They sense temperature, within a preset range and cycle heaters on and off to maintain the set point.

Thermostats may be mounted inside a terminal enclosure or remote mounted (separate from the heater assembly). If using a remote mounted thermostat, be sure to order the sufficient capillary tube length to permit installation.

All Watlow® thermostats are normally closed circuit and either single-pole, single-throw (SPST) or double pole, single-throw (DPST). They can be used with or without an enclosure.

Thermostat selection should be based on temperature range, capillary tube length and sensor bulb size (diameter/length).

Remote Mount Thermostat Assemblies

Remote mounted thermostat assemblies can be supplied with the following enclosures:

- General purpose
- Moisture resistant

Pilot Light

An optional pilot light gives visual indication whether the power supplied to the heating element(s) is on or off.

To order, please specify suffix part PL11.

Thermostat Conversion Kits

Kits are available to convert a heater’s general purpose terminal enclosure to accept either a single- or double-pole thermostat. The kit contains all the necessary parts to change out the existing terminal enclosure cover and mount the thermostat inside.

These are hardware and wiring kits only.

Single-pole conversion kits are for 1, 1 1/4, 2 and 2 1/2 inch NPT screw plugs. To order, specify part number; K492-000-35-(thermostat part number).

Double-pole conversion kits are for 2 and 2 1/2 inch NPT screw plugs. To order, specify part number; K492-000-34-(thermostat part number).

Double-pole conversion kits not available for 2 1/2 inch NPT FIREBAR screw plugs.

Warning

Do not use thermostats for high-limit sheath protection. Thermostats fail in a closed circuit mode and will not cut power to the heaters. Limit control should be provided by an isolated, redundant sensor and control system of the appropriate type, design and installation.

Thermostats are precalibrated at the factory. No adjustment, other than selecting the desired operating temperature, is required. All wiring should be performed by qualified personnel and comply with the National Electrical Code and other applicable state and local codes.

To help assure the correct thermostat is selected as well as installed and wired properly, here are a few helpful hints. Schematics are provided for interconnecting thermostats to single- and three-phase heaters.

Thermostat Dial Scales

All single-pole thermostats will be provided with a dual scale (both °C and °F) dial. All double-pole thermostats will be provided with a Fahrenheit (°F) scale dial. If your application requires a Celsius (°C) scale, order the optional dial.

To order, specify code CD. Scale will match thermostat temperature range.
Technical Information

Application Hints

- Locate the thermostat where ambient temperatures do not exceed 150°F (65°C).
- Mount the thermostat in an enclosure that is compatible with the surrounding environment.
- Immerse the entire sensing bulb in the media being heated.
- Make sure the sensing bulb is mounted away from the heating element(s) to negate any undue influence on the sensing bulb's temperature "reading."
- Keep the capillary tube insulated from electrical connections.
- Do not use a thermostat for high-accuracy temperature sensing. Use an appropriate thermocouple, RTD or thermistor and temperature control.
- Do not use thermostats as a primary power switching device. Use a disconnect switch or circuit breaker to cut power when servicing.
- Interconnect the thermostat to the heater only if:
  - The heater has one circuit
  - The heater’s ampere draw is lower than the thermostat’s rated ampacity at prescribed voltage.
- Interconnect either a single- or double-pole thermostat with a single-phase heater when the supply voltage does not exceed 250VAC for SPST or 480VAC for DPST.
- Only interconnect three-phase delta heaters to DPST thermostats.
- Use a single-pole thermostat for pilot duty where the thermostat is not interconnected with the heater, or heater exceeds the volt/amp rating.

Pilot Duty Wiring

**SPST, 1-phase**

Interconnected Wiring

**SPST, 1-phase**

**DPST, 1-phase**

**Note:** See chart on previous page.

**Enclosure (Remote Mount Only)**
- **S** = General purpose
- **W** = Moisture resistant

**Options**
- **CD** = Celsius dial scale (Double pole only)
- **CB** = Chrome bezel (Double pole only)
- **LTB** = Liquid-tight brass fitting (¾ in. - 18 NPT)
- **PL11** = Pilot light, 120V only available on moisture/explosion resistant and explosion resistant enclosures

**Example Part Number:** 2 W LTB
Protective Wells

Protective wells isolate and protect thermostat bulbs and other temperature sensors (thermocouples, RTDs or thermistors). They allow inserting the sensing element sufficiently into the media being heated without being damaged.

Steel or stainless steel protective wells are available in three lengths. They are supplied with 1/2 inch NPT mounting and 3/8 inch-18 NPT internal thread for mating to a liquid-tight bushing (LTB).

To order, specify the appropriate part number from the table below.
